

Future genetic resilience quantified per GCM — California Coast
SSP5-8.5 2081-2100 | each of 5 GCMs classified independently; maps show modal class and explicit classification uncertainty

Per-GCM resilience classification — model-agreement map
(color = modal class across 5 GCMs; opacity = agreement)

Classification uncertainty by latitude
(average across 5 GCMs of the class vote share)

Model consensus strength
(populations by agreement level, colored by modal class)
