

Predicted Genetic Diversity Along California Coast

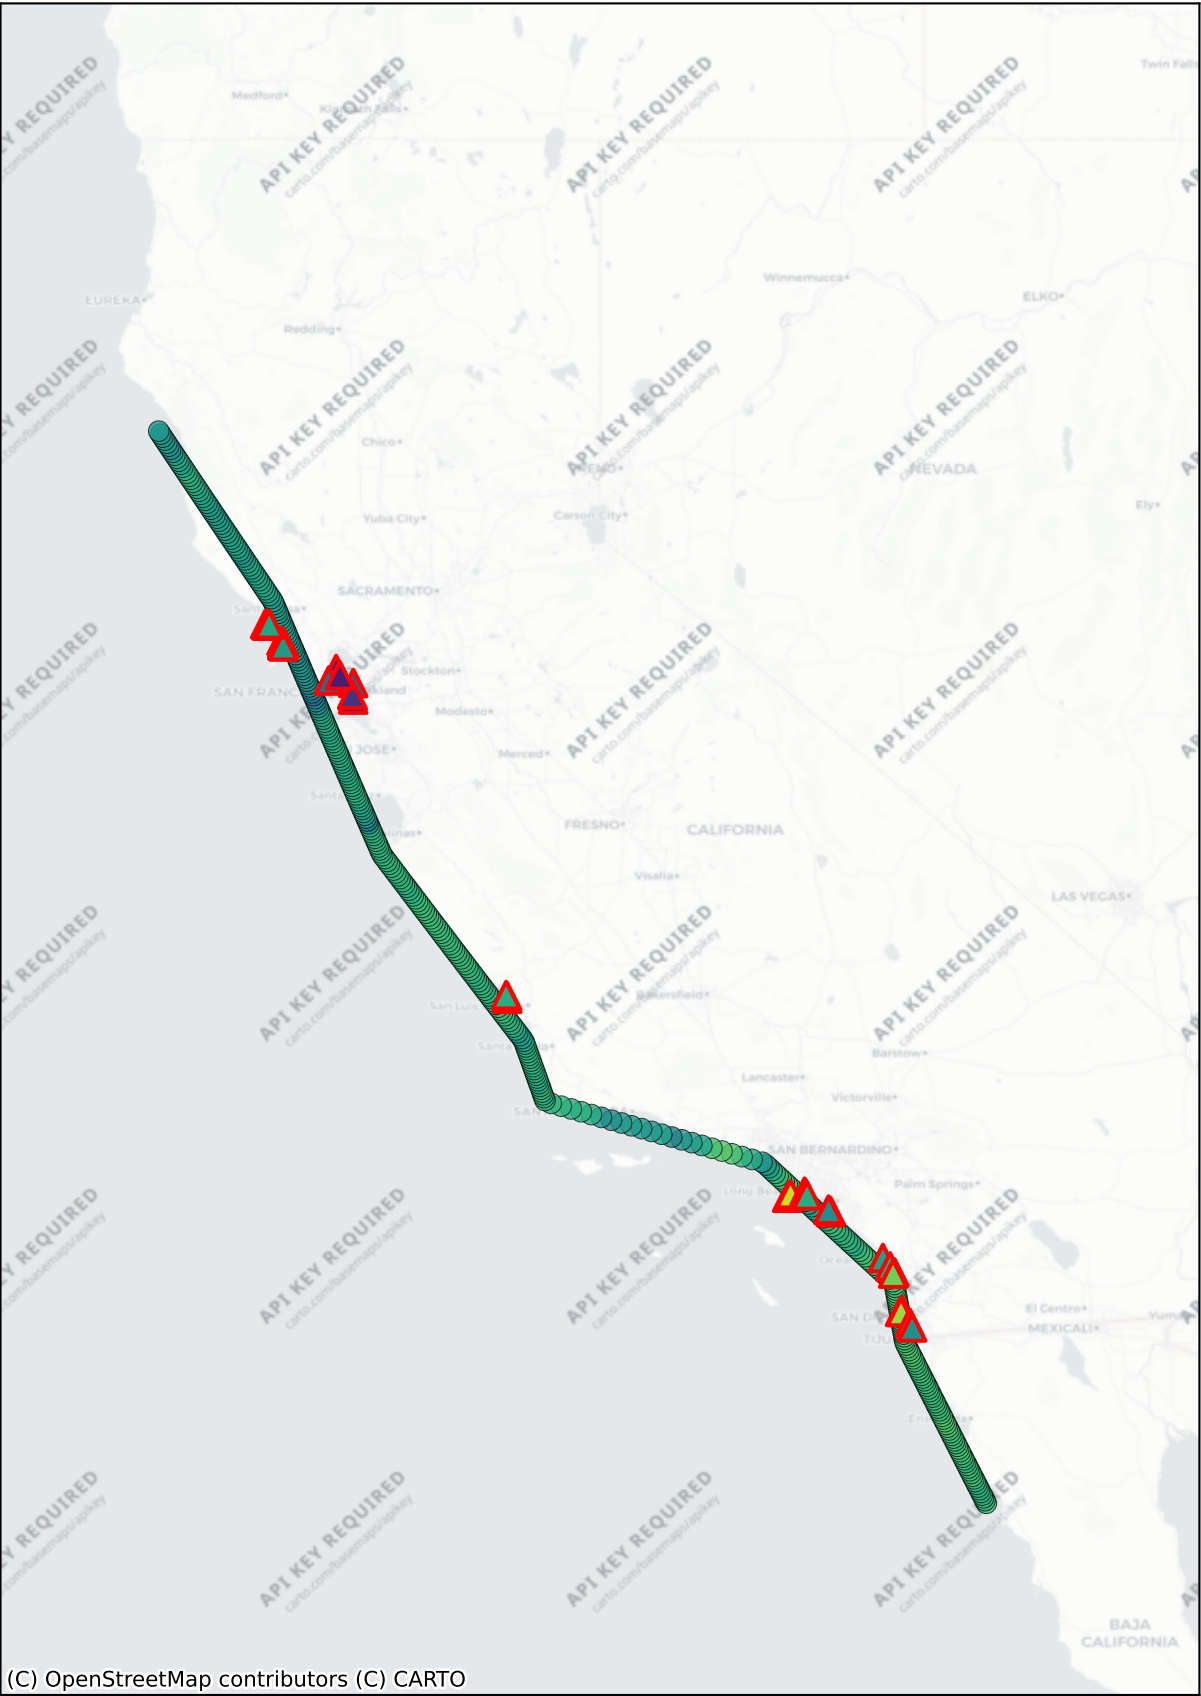

Eucyclogobius newberryi
(He, n=66, mean=0.351 ± 0.125)

Macrocystis pyrifera
(He, n=60, mean=0.677 ± 0.110)

Zostera marina
(He, n=56, mean=0.559 ± 0.038)

Emerita analoga
(pi, n=38, mean=0.004 ± 0.002)

Lottia scabra
(pi, n=29, mean=0.001 ± 0.001)

Pollicipes polymerus
(pi, n=29, mean=0.008 ± 0.001)

● Predicted diversity (circles along coast) ▲ Observed diversity (triangles, red-edged) ■ High diversity ■ Low diversity
