

Present-day genetic resilience quantified per GCM — California Coast
Δ-climate exposure (coming SSP5-8.5 change to 2081-2100) varies by GCM; present-day diversity | each of 5 GCMs classified independently

Per-GCM resilience classification — model-agreement map
(color = modal class across 5 GCMs; opacity = agreement)

Classification uncertainty by latitude
(average across 5 GCMs of the class vote share)

Model consensus strength
(populations by agreement level, colored by modal class)
